

Learning and Management System – LMS

System to plan and execute training programs, record employee training data and maintain the training history of an organization.

Challenge

- A system that can interface with any HR system .
- A system that can interface with online training-tools.
- A collaborative system that can help trainees/employees, trainers and training managers coming under single platform.
- A system that can help the training managers to create and conduct courses.
- Training man-hours and training records maintenance over the web/cloud.

LSS's Solution:

- Web-based system to easily create and manage courses.
- Managers can nominate and track their teams for various required courses.
- Online escalations for course expiry or licenses expiry.
- Examinations and certifications management.

Customer Feedback:

Training department of any organization appreciates LMS as it helps them to bring all their records under single database on the cloud. Industries where training is a regular and key process, LMS plays a major role in helping them create and conduct courses, track the course expiry etc. Its open interfaces helps to connect with any HRMS system for the employee information synchronization.
